**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In dependent claim 1 states "a conduit within the capsule having open upper and lower ends and extending sealingly through the capsule". This is not understood. Conduit 23 appears to be blocked at its upper end by plug 44. Clarification is required.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1,2,4,5,7 and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Vandevier.

Vandevier discloses a downhole pump assembly 39,35,33,45. The pump assembly has an intake 37 and a discharge (unnumbered). Capsule 31 encloses the pump assembly to isolate the assembly from the well fluid. A flow control device 45

selectively communicates well fluid with the pump intake through outlet ports (unnumbered) see figure 2B. These outlet ports communicate selected well fluids to the pump intake 37. The pump assembly itself makes up the conduit that has open upper and bottom ends extending though the capsule for accessing a portion of the well below the capsule. As to claim 2, a string of tubing supports the pump assembly (unnumbered, the lower portion of which can be seen in figure 2A). As to claim 4, the upper end of the pump assembly or conduit is aligned with the supporting tubing. As to claim 5, the discharge of pump 39 communicates with the tubing. As to claim 7, means 45 selectively allows some of the well fluid to be communicated to the pump intake while blocking some of the well fluid from the pump intake (see figure 2). As to claim 10, a portion of the flow control device is within the capsule. This is considered to read on the flow control device located within the capsule.

***Allowable Subject Matter***

Claims 12-24 are allowed.

Claims 3,6,8,9 and 11 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
